

Abanob Nabeh

Flutter Developer — Laravel Backend Engineer

Cairo, Egypt — +20 122 866 1021 — abanobnabeeh@gmail.com — linkedin.com/in/abanobnabeh — github.com/AbanobNabeh

Summary

Flutter Developer and Laravel Backend Engineer with hands-on experience in designing, developing, and deploying production-grade mobile applications and scalable backend systems. Skilled in building cross-platform applications using **Flutter & Dart**, and developing secure RESTful APIs using **Laravel & PHP**.

Experienced in integrating Firebase services (Authentication, Firestore, Cloud Messaging), payment gateways (Paymob), and third-party APIs. Strong knowledge of **Clean Architecture**, SOLID principles, and scalable system design.

Built and delivered multiple real-world applications including FinTech, e-commerce, social media, and real-time chat systems. Published open-source Flutter packages on pub.dev. Focused on writing clean, maintainable, and performance-oriented code for production environments.

Technical Skills

Mobile Development: Flutter, Dart, Cross-platform Development, Android, iOS, Responsive UI, Material Design, Widget Lifecycle

Backend & APIs: Laravel, PHP, RESTful APIs, API Integration, Authentication Systems, Payment Gateway Integration (Paymob)

State Management & Architecture: Bloc, Provider, GetX, MVVM, Clean Architecture, SOLID Principles

Databases: MySQL, SQLite, Firebase Firestore

Cloud & Services: Firebase Authentication, Firebase Cloud Messaging (FCM), Firebase Storage

Tools & DevOps: Git, GitHub, CI/CD Basics, Postman, Agile Development, Version Control

Programming Languages: Dart, PHP, JavaScript, SQL

Soft Skills: Problem Solving, System Design Thinking, Team Collaboration, Communication, Time Management

Experience

Flutter Developer — Laravel Backend Engineer — Freelance

2023 – Present

Mobile & Backend System Development

Cairo, Egypt

- Designed, developed, and deployed production-grade cross-platform applications using Flutter & Dart across multiple domains including FinTech, e-commerce, social media, and real-time chat systems.
- Built and integrated scalable backend systems using Laravel & PHP, exposing secure RESTful APIs for mobile applications.
- Integrated Firebase services including Authentication, Firestore, and Cloud Messaging (FCM) for real-time features and user engagement.
- Implemented advanced state management architectures using Bloc, Provider, and GetX following Clean Architecture and SOLID principles.
- Developed and published an open-source Flutter package (**paymob_flutter**) on pub.dev, simplifying Paymob payment integration for developers.
- Integrated third-party services including Paymob payment gateway, Google Maps API, and external RESTful services in production applications.
- Delivered a production application published on Google Play Store with real-time geolocation and live API-based data processing.

Open Source

paymob_flutter

May 2026

Flutter Package — pub.dev

[pub.dev](https://pub.dev/packages/paymob_flutter)

- Published a Flutter SDK for the Paymob payment gateway on pub.dev, enabling developers to integrate card payments in just 3 lines of code.
- Handles the full payment flow: authentication, order registration, and payment key generation.

easy_store

Flutter Package — [pub.dev](#)

May 2026

[pub.dev](#)

- Published a Flutter storage SDK on [pub.dev](#) that unifies SharedPreferences and SQLite under a single API, eliminating repetitive boilerplate across projects.
- Supports type-safe key-value storage, full SQLite CRUD operations, and multiple database instances with a single `EasyStore.init()` setup.

Projects

Qash Platform

May 2026 – Jun 2026

FinTech Ecosystem (Flutter + Laravel)

[Live Demo](#) — [GitHub](#)

- Developed a complete FinTech ecosystem including mobile application and backend system for digital payments and wallet management.
- Built Flutter app using scalable architecture with Bloc / GetX state management.
- Developed Laravel backend with secure RESTful APIs for authentication, wallets, and transactions.
- Integrated Paymob payment gateway for secure financial transactions.

iClick Platform

Jun 2024 – Jul 2024

Social Media System (Flutter + Laravel)

[Live API Demo](#) — [GitHub](#)

- Built a social media platform supporting posts, stories, reels, likes, comments, and real-time notifications.
- Developed Flutter mobile application integrated with Laravel REST API backend.
- Implemented Firebase Cloud Messaging for push notifications.
- Designed scalable authentication and content management system.

Weather Plus

Oct 2024

Mobile Weather Application

[Google Play](#)

- Published a production weather application on Google Play Store with real-time weather forecasting and geolocation services.
- Integrated REST APIs for live weather data and multi-day forecasting.

DarkStore

Dec 2022 – Jan 2023

E-Commerce Platform (Flutter + Laravel)

[GitHub](#)

- Built a full-featured e-commerce system using Flutter frontend and Laravel backend.
- Integrated Paymob payment gateway, Google Maps, and RESTful APIs.
- Implemented cart, checkout, product management, and order system.

DarkChat

Feb 2022 – Mar 2022

Real-Time Chat Application

[GitHub](#)

- Developed a real-time messaging application using Flutter and Firebase.
- Implemented authentication, group chat, and Bloc state management.

Quiz App

Jul 2024

Interactive Learning Application

[GitHub](#)

- Built a multi-level quiz application with category-based gameplay.
- Implemented local data persistence using SQLite and SQFlite.

Education

Bachelor of Management Information Systems (MIS)

2021 – 2025

Pharaohs Higher Institute for Computer Science, Information Systems and Management — Giza, Egypt

- Studied Management Information Systems (MIS) combining software systems, databases, and business processes.
- Covered topics in database design, system analysis, programming fundamentals, and enterprise information systems.
- Developed academic projects involving software development and data-driven applications.
